

Substation control and automation

Talus 2000-C10

Product overview

GROUPE SCHNEIDER

■ Merlin Gerin ■ Modicon ■ Square D ■ Telemecanique

Consumer Protection Act 1987

According to the provisions of the United Kingdom Consumer Protection Act 1987, Schneider Limited may be liable to consumers in respect of damage to the consumer's person or property caused by equipment manufactured by it or by products incorporating equipment manufactured by it, irrespective of whether it can be shown that Schneider Limited was in any way negligent.

Schneider Limited accept this responsibility for System configuration and System components as delivered, installed or commissioned by Schneider Limited personnel or its authorised agent(s).

In all cases where any detail of System configuration, or any hardware or software component of the equipment, is modified, replaced or changed by the Purchaser or his authorised representative, the Purchaser shall indemnify Schneider Limited in full against any liability incurred by reason of the above act, its equivalent in European Economic Community law or by the laws and/or regulations applicable in any other country. All cases of dispute shall be judged under English law irrespective of the country of origin.

Introduction

The Talus 2000-C10 is a cost effective, low risk solution which includes typical RTU functionality and uses extensive proven circuitry and proven software routines.

Talus 2000-C10 is targeted for distribution substations applications requiring programmable functionalities with connectivity to multiple intelligent electronic devices (IEDs), but with the capability for discrete I/O. It is therefore particularly suited to both the greenfield and retrofit Primary Distribution Substation markets.

The main features are :

Integrated or coordinated solution

- integrates with other Schneider products to provide the total substation solution
- multi-protocol capability to host(s)
- capability to communicate and manage other manufacturers Intelligent Electronic Devices (IEDs)
- retrofit capability plus upgrade of functionality

Programmable automation functions

- supports a full range of mathematical and logical operations
- time based and event based derivation blocks
- application examples include:
 - data manipulation
 - automatic distribution network reconfiguration
 - interlocking of events/controls

Modular, extendible architecture

- eight serial ports for external communications (as standard)
- dual internal modem support with each modem catering for main and standby lines
- configurable via Personal Computer
- large discrete I/O capacity
 - 32 or 64 digital inputs
 - 8 or 16 secure control outputs
 - 8 or 16 analogue inputs

Integration with network control systems

- assured compatibility with the Milenium 8000 range
- multiple host capability
- provides the network gateway to substation equipment
- data concentrator functionality

Investment for the future

- designed for adaptation to the emerging international standards
- designed for discrete retrofit and digital architectures

2

Programming capability

Programs are written on a personal computer in a high level language. The routines and statements are compiled by Schneider WHIRL software utility prior to downloading to the controller.

Functionality available includes:

- Support for a full range of mathematical and logical operations
- Time based and event based derivation blocks
- WHIRL compiler with built-in simulator for monitoring and debugging programs prior to downloading

3

Enclosure

The standard enclosure for the Talus 2000-C10 is:

- wall box
- nominal dimensions 1200mm (h) x 600mm (w) x 300mm (d)
- colour RAL 7032 (mid-grey)

4

Housing and backplane

The central item of the Talus 2000-C10 is the 19" rack which incorporates the backplane . The backplane removes the need for any connectors on the front face of any I/O module, allowing complete freedom of module access.

The backplane is designed to accommodate:

- two modems
- one Talus 2000-C10 controller
- one service card
- up to nine I/O cards
- connection to extension rack

5

Talus 2000-C10 controller

Each TALUS 2000-C10 is fitted with one controller card which manages all activities. The controller module includes a 32 bit microcontroller and provides the following:

■ Protocol/emulation

Standard Schneider WISP+ protocols are used giving high security of data transmission while maintaining compatibility with existing Schneider devices.

The architecture of the Talus 2000-C10 enables international protocols and other proprietary protocols to be emulated when required.

Protocols/emulations available and proven include those required to communicate with SEPAM and other digital relays. Concurrent emulation of different protocols on adjacent I/O channels is also supported.

■ Multiple host support:

The Talus 2000-C10 can support up to 2 host systems with independent databases.

■ 8 Serial Ports:

- two for Host Comms
- two for Master Comms/ IED (for communication with slave RTU)
- two for IEDs
- one for I/O Module
- one for a local terminal

6

Service card

Each Talus 2000-C10 includes one service card, which is responsible for the power distribution to the different cards and to the extension rack.

The main features of the service card are:

- connection, switching and distribution of 'plant power' to the backplane
- connection and switching of incoming 'control power'
- provision of a 'dummy control' circuit

7

Input/Output cards

The Talus 2000-C10 housing can include up to nine of the following Input/Output cards according to the customer requirements:

■ Digital Input Card

- option of 64 or 32 channels
- option of 24V or 48V battery systems
- 'health' LED visible at the front of the card

■ Control Output Card

- option of 8 or 16 (two-pole) channels
- option of 24V or 48V battery systems
- 60V, 1A, 60W (non-inductive load)
- 'health' LED is visible at the front of the card

■ Analogue Input Card

- option of 16 or 8 channels
- 12 bits plus sign conversion
- 4 - 20mA, $\pm 10\text{mA}$, $\pm 20\text{mA}$ and $\pm 1\text{V}$, $\pm 2\text{V}$, $\pm 5\text{V}$ and $\pm 10\text{V}$ ranges as standard
- 'health' LED is visible at the front of the card

8 Communications

8.1 Inter-Module

Communications between the main controller and the I/O modules is via an RS485 two wire link, utilising the WISP+ protocol at 9600 baud.

8.2 External

The main controller communicates with:

- Host devices utilising WISP+ as standard
- Devices conforming to the standardised IEC 870-5-101 protocol*
- Satellite RTUs utilising WISP+
- IEDs using MODBUS** (such as SEPAM)
- Courier (GEC K Series) relays**
- Other devices/protocols available on request**

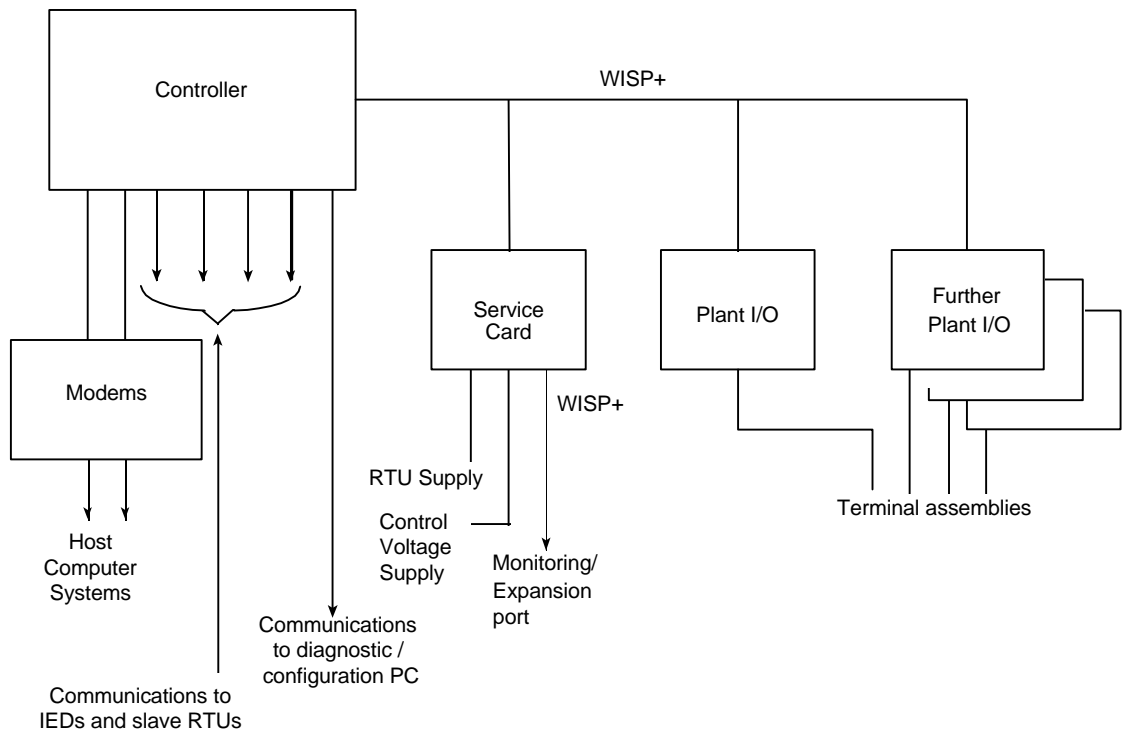

* These protocols are scheduled to be available in December 1997.

** Please contact Schneider Limited, PMS Division for more information.

8.3 Modem

Up to two modems can be included in the Talus 2000-C10, with the following features:

- V23 & BELL 202
- 1200, 600, 150, & 75 Baud
- BAPT approved for use on analogue speechband/private circuits
- Support for main & standby lines
- Support for dual communications ports
- Support for radio switch

Talus 2000-C10 Architecture

9

Environmental specifications

Talus 2000-C10	
Serial channel isolation	1.5KVrms
Plant cabling	2.5mm ² max (screw terminals) 0.4mm ² min/0.65mm ² max (Krone terminals)
Operating temperature range	-0C to +50C
Storage temperature range	-40 to +50C
Relative humidity	10% to 90% non-condensing (standard) 10% to 95% non-condensing (tropicalised)
Safety	BS EN 41003 and BS EN 60950
EMC emissions	BS EN 55022 Class A
EMC immunity	BS EN 50082-2 (industrial generic standard) IEC 255-22-3 Class III IEC 255-4 Class III (5KV impulse)
Wallbox	IP54

10

Configuration, test and maintenance

A full range of tools is provided to configure and testing the Talus 2000-C10. This include:

- A configurator, which generates a file from a personal computer for downloading information to the controller
- A modem configurator
- A local Video Terminal (VT) facility that allows the database to be examined or diagnostics to be run
- A Talus master terminal unit utility (TMTU), used to test devices employing the WISP+ message set
- A TLINE utility which runs on a personal computer enabling WISP+ messages, to and from the devices, to be interpreted and displayed
